

LSAT Repeater Data

The table on this page presents distribution for "Repeaters"; that is, candidates who took the LSAT in 2010–2011 after having taken it previously. The table shows the amount by which these candidates' latest scores differed from their previous scores. Keep in mind, however, that the table only reflects the percentage of test takers who repeated the LSAT. Individuals need not take the LSAT more than once unless they believe some circumstance, such as illness or anxiety, prevented them from performing as well as they might have expected. Most people take the test only once; last year 66.2 percent of the total number of test takers took the LSAT just one time; 26.3 percent took the test twice; and approximately 7.4 percent took the LSAT more than twice.

Find your previous LSAT score. Look at the number in the PLUS column in the row for your score; this is how many test takers with that score improved their score upon repeat of the test. Then, look at the number in the NOCH column in the row for your score; this is how many test takers had no change in score the next time they took the test. Finally, look at the number in the MINUS column in the row for your score; this is how many test takers obtained a score that was lower than their previous score. For example, when test takers who obtained a 152 the previous time took the test again, 1,206 improved their score, 175 had no change in score, and 487 had a lower score. Remember that the standard error of measurement for the LSAT is about 2.6 points.
